RevFactor Meta Ads Plan

Meta advertising plan for RevFactor, aligned to the Acquisition.com playbook. Dual-persona creative, $3,000 to $5,000/mo starting budget.

Prepared 2026-08-06 · Thrive Local · Owner: Aaron · For review with Federico + Gaston

Prepared: August 6, 2026 | **Channel:** Meta (Facebook + Instagram) | **Budget:** $3,000-5,000/mo | **Commitment:** 3 months

---

Bottom Line

We are launching one Meta campaign at $3,000-5,000/mo built around founder-face video from Fede, three proven hook angles, and two mirror personas (her and him) of RevFactor's best customer. The funnel is ad to GHL landing page to booked call, with pixel + CAPI and offline conversions closing the loop. At the modeled $75-150 cost per booked call, 70% show rate, and 25% close rate, Meta produces roughly **3.5 to 11.7 new clients per month** at a **CAC of $420-890** against a **~$7,600 12-month client value**, a **9:1 to 18:1 LTV:CAC**, triple Alex Hormozi's 3:1 minimum, with CAC paid back in **~1.4 months** of client revenue. Target contribution: **15-25 of the +50 client goal** over the 3-month window, blended with referrals, Google, and organic.

Metric	Value
Monthly budget	$3,000-5,000 ($100-165/day)
Cost per booked call (modeled)	$75-150
Show rate / close rate	70% / 25%
Projected new clients per month	3.5-7 (at $3k), up to 11.7 (at $5k)
CAC	$420-890
12-month client value	~$7,600 (avg 1.8 properties, ~$630/mo + onboarding)
LTV:CAC	~9:1 to 18:1 (Hormozi minimum: 3:1)
CAC payback	~1.4 months
Only paid benchmark to date	Google, July: $1,457 spend, 3 booked calls, $486/booking

---

Hormozi Alignment: What We Are Taking From Acquisition.com

Fede attended the Acquisition.com event; this plan is built on the actual frameworks from $100M Leads and Hormozi's published content. Every claim below is sourced.

Framework	What Hormozi teaches	How RevFactor applies it
The Core Four	Only four ways to get leads: warm outreach, content, cold outreach, and paid ads. Paid ads are the scale channel you add once the offer and sales process are proven. (Shortform: $100M Leads overview)	RevFactor already has referrals (warm), Fede's podcast/social (content), and Google. Meta is the fourth engine, added now that the offer, pricing, and close process are proven.
Ad anatomy: call-out, value, CTA	A paid ad has three jobs: call out the ideal customer (verbal and visual "callouts" that trigger the cocktail-party effect), communicate value via What-Who-When, and give one clear CTA. (Deciphr: $100M Leads Part 6, Run Paid Ads, Shortform)	Every ad opens with an explicit callout ("If you self-manage an Airbnb doing $50k+ a year...") and visual callouts (design-forward STR interiors, PriceLabs/Hospitable screens). One CTA: book the free revenue audit call.
Hook, Retain, Reward	Hormozi's creative anatomy: hook attention in the first seconds, retain with story or value, reward the viewer so they act. (Shortform)	Each Fede video is scripted in three beats: hook (one of the 3 angles below), retain (the airline pricing story or case-study math), reward (the concrete takeaway plus the call CTA).
More, Better, New	The scaling sequence: do MORE of what works, make it BETTER by fixing funnel drop-off, and only then add NEW angles/channels. Hormozi tested 1,100+ creative variations to find winning hooks; volume of creative testing is the job. (Greg Faxon: $100M Leads summary, VidTao: Hormozi lead magnet framework)	Weekly creative cadence in the 3-month roadmap: scale winning hooks (more), fix the weakest funnel step (better), introduce fresh hooks only on refresh gates (new).
LTV:CAC doctrine	Minimum 3:1 lifetime gross profit to CAC; higher for service businesses with human delivery. (Shortform: The Game Ep 928, "LTV vs CAC: The Ratio That Runs Everything")	At $420-890 CAC vs ~$7,600 12-month value, RevFactor runs at roughly 9:1 to 18:1. Even at the worst modeled CAC we clear the service-business bar.
Client-financed acquisition	Gross profit in the first 30 days should exceed 2x (CAC + COGS), so each client funds the next acquisitions. (Shortform Ep 928, Shortform Ep 990, "The Mathematics of Business")	First-30-day cash per client is ~$900 (1.8 properties: $270 onboarding + $630 first month). At the good end of CAC ($420-450) we hit true client-financed acquisition; at the high end ($890) payback stretches to ~1.4 months. Still strong; the onboarding fee is what makes the math work, keep it.
Rule of 100	Consistency floor for lead gen: $100/day on ads (or 100 outreaches, or 100 minutes of content) every day. (FINSYNC: $100M roadmap summary)	The $3,000/mo entry tier is exactly Hormozi's $100/day floor. We do not run below it.
Lead magnet vs direct-to-call	Give away the secrets, sell the implementation: a free offer that solves one narrow problem completely makes strangers want the paid thing. (Manas Saloi: $100M Leads notes)	Launch direct-to-call, but the call itself is packaged as the lead magnet: a **free revenue audit** ("we show you exactly what your properties should have earned last quarter"), not a sales call. A downloadable pricing-audit lead magnet is the Phase 3 add if call costs run high.
Founder-face creative	Hormozi's own playbook is personal-brand-led: raw founder-face video, real numbers, extreme transparency, consistent look, high posting volume. This is demonstrated practice across his channels rather than a book chapter. (Void X Global: Hormozi brand case study, Course Unlocked: Hormozi marketing virality)	Every launch creative is Fede on camera, direct to lens, using his real stories and real client numbers. No stock footage, no faceless motion graphics.

Personas: The Two Best-Customer Mirrors

Same qualification filters, same targeting pool, different psychology. This is a **creative split, not separate campaigns**.

HER: The Design-Forward Self-Manager

Dimension	Profile
Who	Woman, 35-55, professional career in tech, healthcare, finance, or a creative field, $200k+ household income
Portfolio	Owns 1-5 design-forward vacation rentals in drive-to leisure markets (Smokies, beaches, lakes, mountains) doing $50k-500k/yr
Stack	Self-managing with a PMS (Hospitable or Hostaway); has or has tried PriceLabs
Identity	The property is an expression of taste and identity; she is proud of it and protective of the guest experience
Pains	Underpricing peak weekends, over-discounting slow periods, guilt every time she logs into PriceLabs and sees settings she has not touched, the constant mental load of "should I adjust rates?"
Dream outcome	"Every night priced right without me touching anything, and proof in black and white that I am beating the market"
Buying triggers	Proof of +20-25% RevPAR, transparent dashboards she can check anytime, a flat fee that visibly pays for itself, social proof from women like her

HIM: The Asset Optimizer

Dimension	Profile
Who	Man, 38-58, engineer, executive, or owner-operator mindset, $200k+ household income, same markets and portfolio profile as her
Portfolio	1-5 STRs in drive-to leisure markets, $50k-500k/yr, self-managed on Hospitable/Hostaway, has or has tried PriceLabs
Identity	The STR is an **asset to optimize**, not an identity piece; he thinks in yield, benchmarks, and opportunity cost
Psychology	Data-curious but time-poor; he built a spreadsheet once, updated it for three weeks, and resents both the spreadsheet and the hours it ate
Pains	Underperformance vs the market benchmark he suspects but cannot verify, wasted hours in spreadsheets and pricing tools, knowing a tool he pays for is running on defaults
Dream outcome	"My property runs like an institutional asset, with performance verified against market data, without me being the analyst"
Buying triggers	Beat-the-market proof vs comp set, explicit ROI math ($630/mo fee vs $47k single-property upside), an audit-able methodology he could interrogate if he wanted to, delegation without losing visibility or control

---

Offer and Message Map Per Persona

The offer (both personas): Done-for-you Airbnb/STR revenue management. Flat $350/mo per property plus $150 onboarding. No percentage of revenue. Free revenue audit call as the entry point.

Element	HER	HIM
Core promise	Every night priced right, without you touching anything	Your property, run like an institutional asset
Pain language	"The mental load of pricing," "the guilt of logging into PriceLabs," "you built something beautiful, pricing it shouldn't be your second job"	"You're leaving money on the table vs your comp set," "your pricing tool is running on defaults," "hours in spreadsheets that a specialist does better"
Proof framing	Real dashboards, transparent reporting, testimonials from women who own similar properties, +24% RevPAR vs comp set	The numbers first: +$139,580 across 7 properties, +$47,459 on a single property, +24% RevPAR vs published comp set, methodology explained
Fee framing	"The flat fee pays for itself in one well-priced weekend"	"$630/mo average vs $47k documented single-property upside; the ROI math is not close"
Control answer	You see everything in the dashboard; nothing is hidden	Full visibility, audit-able decisions, you delegate execution, not oversight
CTA	Book a free revenue audit: see what your property should have earned	Book a free revenue audit: get your numbers benchmarked against the market

---

Campaign Architecture

One campaign at launch. Meta Sales objective, optimizing for the booked-call conversion event (fired via GHL + CAPI).

Decision	Choice	Why
Campaign count	1	Budget is too small to split; consolidation feeds the learning phase (Meta needs ~50 conversion events per ad set per week to exit learning)
ABO vs CBO	**ABO for months 1-2**, migrate winners to CBO/Advantage+ in month 3	ABO guarantees each ad set (and therefore each persona-agnostic audience) gets spend during testing; CBO at this budget would starve the losers before they get a fair read
Ad sets	2: (1) **Broad** (US, 35-58, no interest stack, creative does the targeting) and (2) **STR host interest stack** (Airbnb hosting, Vrbo, Hospitable, Hostaway, PriceLabs, short-term rental investing)	Hormozi's callout doctrine: the ad copy filters the audience harder than Meta's targeting can. Broad is the scale bet; the interest stack is the insurance policy. Lookalikes from Gaston's client list are added as a third ad set once delivered
Placements	Advantage+ placements, 9:16 and 1:1 masters	Let Meta allocate; vertical video is the native unit for the Fede creative
Personas	Both personas run in **both** ad sets	Same qualification filters, so the split lives in the creative, and Meta's delivery finds who responds to which

Creative Matrix: 3 Hooks x 2 Personas + Case-Study Cut

All founder-face video, Fede direct to lens, scripted hook / retain / reward. Eight launch assets.

#	Hook angle	HER cut	HIM cut
1	**First-class refund story**: "I paid $7,000 for a first-class seat. The airline refunded me $2,500 because the price dropped to $4,500. Airlines reprice every seat every day. Your Airbnb..."	Lands on mental load: "airlines have a whole department for this, you have a Tuesday night after work"	Lands on benchmark: "airlines run yield management as a discipline, your listing runs on defaults"
2	**Empty seat**: "When a plane takes off with an empty seat, that seat can never be sold again. Your Airbnb is the same. Every unsold night at the wrong price is gone forever."	Lands on relief: "you shouldn't have to think about this every night, that's the whole point"	Lands on lost yield: "count last month's empty nights, multiply by your rate, that's the leak"
3	**Booking notification**: "You get the booking notification and you feel good for a second. Then the thought: could I have charged more?"	Lands on the guilt loop and the dream: "every night priced right without you touching anything"	Lands on verification: "we answer that question with market data, in writing, every month"
4	**Case-study numbers cut** (anonymized): +$139,580 across 7 properties, +$47,459 on a single property, +24% RevPAR vs published comp set	Proof-and-trust edit: dashboard walkthrough tone	Straight numbers edit: benchmark chart on screen, methodology in one line

Static/carousel versions of #4 (numbers cards) run as retargeting support.

Funnel and Tracking

Ad > GHL landing page > booked call > speed-to-lead + BANT vet > sales call (free revenue audit).

Stage	Spec
Landing page	GHL. 80% of the page: header, VSL, CTA. 20%: social proof (case-study numbers, testimonials). One page variant per hook angle for message match (headline mirrors the ad's hook)
Booking	Embedded calendar on the same page; no multi-step detour
Speed-to-lead	Instant SMS + email confirmation, human follow-up inside 5 minutes during business hours (requires A2P registration, see checklist)
Vetting	BANT vet before the call: property count, revenue band, PMS in use, self-managed status. Unqualified leads get the content path, not a call
Pixel + CAPI	Meta pixel on the GHL page plus Conversions API server events from GHL: Lead (form), Schedule (booked call)
Offline conversions	Showed call, qualified, and closed-won pushed back to Meta as offline conversion events so optimization moves down-funnel over time
Attribution hygiene	UTMs per ad; GHL pipeline stages mirror the funnel so cost per showed call and cost per client are readable weekly without spreadsheet archaeology

---

Budget Tiers and Projections

Assumptions per the model: $75-150 cost per booked call, 70% show, 25% close. Reality check: the only live paid benchmark is Google in July at $486/booked call on $1,457 spend. Meta call costs should land well below high-intent search CPCs, but the $75-150 band is an assumption until roughly day 30 of real data. The kill/scale rules below govern, not the projection.

	$3,000/mo	$4,000/mo	$5,000/mo
Daily spend	$100 (Hormozi's Rule of 100 floor)	$133	$165
Booked calls/mo	20-40	27-53	33-67
Showed calls (70%)	14-28	19-37	23-47
New clients (25% close)	3.5-7	4.7-9.3	5.8-11.7
CAC	$429-857	$429-857	$429-857
3-month client contribution	10-21	14-28	17-35

Hormozi CAC:LTV read: ~$7,600 12-month value against $420-890 CAC is **9:1 to 18:1**, comfortably past the 3:1 minimum and past the higher bar he sets for human-delivered services. First-30-day cash per client (~$900 at 1.8 properties) covers CAC outright at the low end and pays back in ~1.4 months at the high end. Conclusion per the doctrine: **this offer can afford to buy customers aggressively; the constraint is call volume and close execution, not unit economics.**

Recommended path: start at $3,000-3,500/mo, scale toward $5,000 only after the day-30 gate passes.

3-Month Roadmap

Phase	Weeks	Focus	Gates
Build	0 (pre-launch)	Everything in the launch checklist below; shoot all 8 creatives in one session with Fede	No launch until pixel + CAPI verified firing and speed-to-lead tested end to end
Learn (MORE of nothing yet)	1-4	All 8 creatives live, ABO, even budgets. No edits for the first 14 days except true disasters (kill rule below). Weekly readout: CPM, hook rate (3-sec views/impressions), cost per booked call by creative and persona	**Day 30 gate:** cost per booked call at or under $200 blended, and at least 12 booked calls. Pass: hold or scale 20%. Fail: fix funnel (message match, page VSL, booking friction) before touching budget
Better	5-8	Kill bottom half of creatives, reallocate to winners. Fix the single weakest funnel step (likely show rate or page conversion). Launch lookalike ad set from Gaston's client list. Begin scaling winning persona/hook combos +20%/week	**Day 60 gate:** cost per booked call at or under $150, show rate at or over 60%, at least 2 closed clients attributed. Pass: budget to $4,000-5,000
New	9-12	"More, better, new" refresh: 2-3 new hooks from Fede's podcast archive (new stories, same anatomy), new case-study cuts as fresh numbers publish, test the downloadable pricing-audit lead magnet if call costs are stubborn. Migrate winning structure to CBO/Advantage+	**Day 90 readout:** CAC vs the $420-890 model, Meta-attributed clients vs the 15-25 contribution target, decision on month 4+ budget

Creative refresh cadence (per More, Better, New): no new creative in weeks 1-2; from week 3, replace the worst performer only when a creative has spent ~3x its target cost per booked call with zero bookings; from month 2, one new hook variant per week minimum. Winners never get paused for novelty's sake: more of what works first.

Launch Checklist

Ready now

- [x] Offer, pricing, close process proven ($350/property flat + $150 onboarding)
- [x] 3 hook angles identified from Fede's podcast
- [x] Case-study numbers published (+$139,580 / +$47,459 / +24% RevPAR vs comp set)
- [x] GHL in place for landing pages, booking, and pipeline
- [x] July Google benchmark for comparison ($486/booked call)

Still needed before launch

- [ ] **VSL recorded** (Fede; the landing page is 80% header/VSL/CTA, so this blocks the page)
- [ ] **8 launch creatives shot** (3 hooks x 2 personas + 2 case-study cuts), single filming session
- [ ] **Client-list lookalikes from Gaston** (customer list export for Meta custom audience + LAL seed)
- [ ] **Meta domain verification** for revfactor.io in Business Manager
- [ ] **Pixel + CAPI wired and verified** (GHL server events: Lead, Schedule; test events confirmed in Events Manager)
- [ ] **Offline conversion events configured** (showed, qualified, closed-won)
- [ ] **A2P 10DLC registration** for SMS speed-to-lead (blocks the 5-minute follow-up)
- [ ] Landing page variants per hook with message-matched headlines
- [ ] BANT vet questions added to booking flow
- [ ] UTM convention + GHL pipeline stages mirroring the funnel

---

KPIs and Kill/Scale Rules

KPI	Target	Warning	Kill/act
Hook rate (3-sec views / impressions)	>30%	20-30%	<20% after $150 spend: replace the hook
Cost per booked call	$75-150	$150-250	A creative that spends 3x target ($450) with zero bookings dies. Blended >$300 at day 30: pause scaling, fix funnel
Show rate	70%	55-70%	<55%: fix speed-to-lead and reminders before buying more calls
Close rate (of shows)	25%	15-25%	<15%: BANT vet is leaking or the call framing drifted from "free revenue audit"
CAC	$420-890	$890-1,500	CAC >$1,500 sustained past day 45 with funnel fixes applied: cut budget to floor, rework creative before respending
LTV:CAC	>9:1	3:1-9:1	Below 3:1 (Hormozi floor) is the hard stop; at current pricing that means CAC >$2,500, which triggers a full-plan review

Scale rules: any creative or ad set at or under $150/booked call for 2 consecutive weeks gets +20% budget/week. Never scale more than 20-30% at once (learning-phase resets). Winners are duplicated into the lookalike ad set, not moved.

Kill discipline: no reactive daily changes. Decisions on the weekly readout only, except the 3x-spend zero-booking creative kill, which is immediate.
