

RevFactor Performance Dashboard

— 2026-07-22

Prepared by ProCloser.ai

Window: last 30 days (2026-06-23 → 2026-07-22) vs prior 30 days (2026-05-24 → 2026-06-22)

Sources: Peec (AI visibility) · Google Search Console · GA4 (533592968) · Google Ads (5342635272) · Bing Webmaster

Headline

First-ever AI visibility this window — RevFactor went from 0% → 1.1% (27 mentions, avg cite position 3.1). Organic is compounding: impressions nearly doubled (1,922 → 3,785, +97%) and clicks +64%. Strategy-call bookings rose 13 → 19 (+46%). Paid held ~\$1,160/mo but is capped by Quality Score (55–82% of impressions lost to rank), and last-click attributes 0 of those bookings to Paid Search.

1. AI Visibility (Peec) — the GEO play is starting to land

Metric	Prior 30d	Last 30d	Δ
Overall visibility	0.0%	1.1%	+1.1pp (first mentions)
Mentions	0	27	+27
Avg position when cited	—	3.1	strong (top-3)
Sentiment	—	60	positive
Last 7 days visibility	—	1.9%	accelerating

Per-engine (last 30d)

Engine	Visibility	Mentions
Gemini	3.0%	10
Google AI Mode	1.7%	12
Google AI Overview	0.7%	3
ChatGPT	0.3%	2
Perplexity	0.0%	0

Read: From a standing start, RevFactor is now being cited — and when it's cited, it lands in the top 3 (position 3.1). Gemini and Google AI Mode are the early winners; ChatGPT and Perplexity are the whitespace. The Gap Night Playbook + orphan-rate benchmark are exactly the kind of citable, first-party content that moves this number.

Category leaderboard (last 30d) — the mountain to climb

Rank	Brand	Visibility	Mentions
1	PriceLabs	74.7%	2,461
2	Wheelhouse	59.8%	1,299
3	Vrbo	51.2%	1,663
4	AirDNA	31.0%	962
5	Beyond Pricing	29.6%	584
6	Guesty	29.6%	883
7	Hostaway	25.2%	598
8	Vacasa	18.4%	421
9	Hospitable	17.2%	419
10	Evolve	13.4%	277
...	RevFactor	1.1%	27

PriceLabs owns the category. RevFactor is a new entrant — the job is steady content that earns citations on the "how do I fix X" queries the tools don't answer well.

2. Organic Search (Google) — compounding

Metric	Prior 30d	Last 30d	Δ
Clicks	44	72	+64%
Impressions	1,922	3,785	+97%
CTR	2.29%	1.9%	-0.4pp
Avg position	7.3	8.1	+0.8 (more terms surfacing deeper)

Top queries: revfactor (33 clicks), rev factor (11), revenue factor, revfactor.ai, "what companies offer this service." Still almost entirely **brand** — the non-brand blog cluster (orphan nights, dynamic pricing, ADR vs RevPAR) is what converts impressions into non-brand clicks. Impressions doubling is the leading indicator that the content is getting indexed and surfaced; clicks follow.

Bing: 293 impressions / 5 clicks — small but live (this also feeds ChatGPT Search).

3. Paid Search (Google Ads)

Metric	Prior 30d	Last 30d	Δ
Spend	\$1,189.85	\$1,161.75	-2%
Clicks	232	145	-37%
Impressions	3,800	4,290	+13%
Conversions (Ads)	3.0	3.0	flat
CPA (Ads)	\$396.62	\$387.25	-2%
Avg CPC	~\$5.13	\$8.01	+56%

By campaign (last 30d)

Campaign	Spend	Conv
Search — Consultant Intent	\$902.84	3.0
Search — Tool Intent	\$258.90	0.0
Search — Competitor Conquest	\$0.00	0.0
Display Retargeting	\$0.00	0.0

Impression share — the real constraint

Campaign	Impr. share	Lost to rank	Lost to budget
Consultant Intent	16.7%	61.8%	21.5%
Tool Intent	17.8%	81.6%	0.6%
Competitor Conquest	11.6%	54.6%	33.8%

Read: Spend is steady but CPC jumped 56% and clicks fell — we're paying more per click and still losing 55–82% of impressions **to rank, not budget**. That's a Quality Score / landing-page relevance problem, not a bidding one. Fixing QS (ad-to-LP message match, the 15 sub-4 QS keywords flagged in the daily digest) is higher leverage than raising bids. Consultant Intent is the only campaign converting; Tool Intent spent \$259 for 0.

4. Conversions (strategy-call bookings)

Source	Prior 30d	Last 30d
Total book_strategy_call (GA4)	13	19 (+46%)

Last 30d bookings by channel (GA4, last-click)

Channel	Sessions	Bookings
Direct	281	12
Organic Search	149	3
Organic Social	46	2
Referral	109	1
Cross-network	4	1
Paid Search	150	0

The attribution gap to watch: Google Ads credits Paid Search **3** conversions; GA4 last-click credits it **0** (all 19 bookings land on Direct/Organic/Social). Paid is driving 150 sessions but the booking is completing later via Direct — classic assist behavior. Net: bookings are up 46% and mostly organic/direct; paid's *direct* ROI is unproven at a \$387 blended CPA. Worth a call on whether paid stays at this level or shifts budget while QS is fixed.

What this means

- **GEO is working.** 0 → 27 AI mentions at position 3.1 in one window. Keep shipping citable first-party content (orphan-rate benchmark, the Gap Night Playbook).
- **Organic is compounding.** Impressions +97%; the content is getting surfaced. Non-brand clicks are the next milestone.
- **Paid is capped by Quality Score, not budget.** 55–82% impressions lost to rank. Fix QS/LP relevance before adding spend; pause or rework Tool Intent (\$259 → 0 conv).
- **Attribution:** bookings up 46% but paid's direct contribution is 0 on last-click. Decide paid's role deliberately.

Suggested next moves

- Content:** publish the Gap Night Playbook + orphan-rate benchmark (25% → 11.9% listing-level, 53% reduction) — first-party data is the highest-leverage AI-citation asset.
- Paid:** QS remediation pass (message-match LPs, prune sub-4 QS keywords); reassess Tool Intent; decide Competitor Conquest (currently \$0 delivery).
- Measurement:** stand this dashboard up as a weekly auto-pull (like L40) if you want it every Monday.
