

RevFactor — YouTube Channel Strategy

A citation-driven plan to get RevFactor cited inside AI answers — built entirely from content we already have.
Prepared 2026-07-27 · Thrive Local · Owner: Aaron → Jlo/team to execute · Source: Peec AI citation data (RevFactor project or_be14dba6, verified live) + Fede's content brain (144 transcripts)

Bottom line. YouTube is the **#1 UGC citation source in RevFactor's Peec set — 52.3% of AI answers to RevFactor's target prompts cite a YouTube video.** RevFactor has **no company channel** — pure whitespace. We can rank higher in AI answers by *being cited on YouTube*, without touching the website, and we can do it from the 144 clips already in Fede's brain. **No new filming yet** — we prove the format on existing footage first, then only film net-new for titles we've confirmed earn citations.

Why YouTube, why now

Mentions/UGC is, for AI search, the highest-impact lever — you can appear in more AI answers without changing the site, just by being cited in the places AI reads. In RevFactor's Peec citation data, YouTube is the single most-cited source type at **52.3% usage**. RevFactor is cited **zero** times there today; the 25 cited URLs are all competitors and creators. That gap is the opportunity.

What AI actually cites on YouTube (the winning formula)

The top-cited YouTube URLs for RevFactor's prompts are almost all **revenue-maximization + pricing** content, from a handful of creators. The pattern is unmistakable:

Cited video	Creator	Citations
How to add \$130,000 to your Airbnb revenue (copy what I did)	Optimize My Airbnb	27
10 Proven Ways to Earn More with Your Short-Term Rental	Short Term Rental Riches	26
11 Ways to 3X Your Airbnb Income (Complete Host Guide)	James Svetec	24
How To Charge The Best Prices For Airbnb (Short)	Inayah McMillan	23
10 Ways to Charge MORE on Airbnb (I Quadrupled My Revenue)	Optimize My Airbnb	22
The BEST Airbnb Pricing Tool 2025 / Just Got 100x Better	James Svetec	15–19

The formula AI rewards: number-led titles (“10 Ways...”, “11 Ways to 3X...”), a **concrete revenue outcome** (“\$130K”, “quadrupled”, “3X”), and **pricing / pricing-tool** framing. Both **long-form guides** and **Shorts** earn citations. This is exactly Fede's wheelhouse — he just isn't on YouTube yet.

Our play: a RevFactor video for each top-cited format — and yes, we have the content

The brain has **144 transcribed clips**, and they map directly onto every cited format. Coverage today: **38** pricing/rate clips, **20** revenue clips (16 with a concrete \$ figure), **42** occupancy/calendar, **39** comp-set/market, **29** review/ranking, **27** amenity/design, **13** pricing-tool, **12** revenue-manager-mindset. We can answer each top-cited video with footage we already have — no filming:

Their top-cited video	The RevFactor video we make	Built from (content we have)
“Add \$130K to your revenue (copy what I did)” · 27	“ How We Added \$20K in ONE Summer to a Single Airbnb (Copy This) ”	Fede’s minimum-stay clip has the real story + number (“an extra \$20,000 that summer”); + 16 clips with concrete \$ results
“ 10 Proven Ways to Earn More” · 26	“ 10 Proven Ways to Earn More From Your Short-Term Rental (2026) ”	Compile 10 of the 38 pricing + 20 revenue + 27 amenity/design clips
“ 11 Ways to 3X Your Airbnb Income” · 24	“ 11 Ways to Grow Your Airbnb Income Without Buying Another Property ”	Same tactic pool + 29 review/ranking + 13 tool clips
“ Charge The Best Prices (Short)” · 23	Short: “The One Pricing Concept Pros Use That Hosts Don’t” (pacing)	The pacing/momentum clip (“price like a professional revenue manager”) + 38 pricing clips
“ 10 Ways to Charge MORE (I Quadrupled Revenue)” · 22	“ 10 Ways to Charge More on Airbnb in 2026 (Without Losing Bookings) ”	38 pricing clips + the “beat the market minimum, charge a premium” tactic + the Airbnb comp-data hack
“ BEST Airbnb Pricing Tool 2025” · 15–19	“ The Best Airbnb Pricing Setup for 2026 (Tool + the Human Layer) ”	13 PriceLabs/tool clips + comp-data hack + revenue-manager-mindset clips; reframes tool → tool+strategist (our wedge)

Ready-now Shorts, each from a single existing clip: “Airbnb literally tells you what your comps charge (free hack),” “Your minimum-stay setting is quietly losing you money,” “Fix orphan gaps with this cancellation-policy trick,” “Price like a pro: the momentum concept most hosts miss.” **Verdict: we have the content for all of it** — the gap is production/editing, not source material.

★ Flagship video — our answer to “Add \$130K to your revenue”

Make this one first: it hits the exact golden-standard format (a big number + “copy this” + the tactics), and **we have the receipts**. Across our seven published case-study properties, the on-the-books summer lift totals **\$139,580** — over the \$130K bar — every figure documented with month-by-month data.

Anonymize in our scripting, titles, and descriptions — show results by market + property type only (“a Gatlinburg cabin”), no property nicknames or owner names. *Exception: if Fede chooses to name a client on camera, that’s his call.*

Market / type (anonymized)	On-the-books summer lift	Pacing vs last yr
Gatlinburg cabin	+\$47,459	+220.7%
Lake Michigan lake house	+\$23,419	+189.1%
Myrtle Beach coastal	+\$21,352	+106.4%
Albion, MI waterfront	+\$17,134	+292.8%
San Diego bungalow	+\$15,322	+98.6%
Minneapolis home	+\$9,356	+101.3%
Norfolk inn	+\$5,538	+57.1%
7 properties, total	+\$139,580	

Two cuts, both from footage + data we already have:

- **Portfolio hero:** “How We Added \$139K to 7 Airbnbs in One Summer (The Exact Playbook)” — mirrors “Add \$130K... copy what I did.”
- **Single-property hero:** “How We Added \$47,459 to One Gatlinburg Cabin in a Single Summer” — cleaner, one story, biggest single number.

The “how” is the same brain tactics on film: minimum-stay flexibility to beat the market floor, the two-cycle ADR climb, and pacing discipline. **Frame the number honestly as on-the-books / ahead-of-last-year** (calendars still booking), not banked profit.

Channel setup

- **We don’t name clients in our video framing** — titles, thumbnails, and descriptions show results by market + property type only (e.g. “a Gatlinburg cabin”), no property nicknames or owner names. *Exception: if Fede chooses to mention a client on camera, that’s his call.*
- **Create a RevFactor company channel** (not Fede’s personal) — brand handle **@RevFactor**, so citations attach to the brand entity.
- Channel art + About using the canonical description (“done-for-you short-term rental revenue management”); link revfactor.io + the discovery-call CTA.
- Every description: a 1–2 sentence answer to the video’s question in the first line (AI reads descriptions), a link to the matching revfactor.io blog, and the discovery-call link.

Content plan — two tracks off the SAME source material

TRACK A Shorts (fast, high-volume): repurpose Fede’s existing vertical content

Fede’s brain has **31 STR-tactic reels/TikToks** already transcribed — vertical format drops straight into YouTube Shorts. Ship the highest-value first, retitled to the cited-Shorts pattern:

- Free-comp-data reel → **“The FREE Airbnb Comp Tool Hosts Overlook”**
- Minimum-stay reel → **“The Minimum-Stay Setting Leaking Your Airbnb Revenue”**
- Host-vs-professional reel → **“What Pro Revenue Managers Do That Hosts Don’t”**
- Seasonal cancellation-policy reel → **“Use Airbnb’s Seasonal Cancellation Policy to Earn More”**
- Dynamic-pricing / calendar reels → **“How to Price Your Airbnb Calendar Like a Pro”**

Batch 2–4 Shorts/week from the backlog. Title each to a **tracked Peec prompt** (“how to increase Airbnb revenue,” “how to price my Airbnb”).

TRACK B Long-form guides (citation magnets) — no new filming

Build these entirely from footage we already have. Each guide is an **edit/compilation of existing clips** grouped by theme, plus on-screen text/B-roll and assembled voiceover — matching the number-led titles AI cites:

1. **“10 Ways to Charge More on Airbnb in 2026”** — stitch 10 existing tactic reels into one number-led guide (fastest to assemble; mirrors the 22–27-citation format).
2. **“How I Add [X] to Airbnb Revenue Without Lowering Rates”** — compile the revenue/pricing reels; use a real portfolio number from case-study data (mirrors the #1 cited “\$130K” video).
3. **“The Best Airbnb Pricing Strategy for 2026 (Tools + the Human Layer)”** — assemble pricing-tool + minimum-stay + calendar reels; reframes tool → tool+strategist (RevFactor’s wedge) to flank the “best pricing tool” videos.
4. **“Orphan Nights: The Airbnb Revenue Leak You Can’t See”** — an animated/slide explainer of the new blog + orphan-rate benchmark (no on-camera Fede required).

Each long-form doubles as the on-site embed for the matching blog (longer on-page time = ranking signal) and gets chaptered (chapters = extractable passages AI can cite).

Only once these existing-footage cuts prove out do we ask Fede to film net-new — and by then we’ll know exactly which titles/topics earn citations, so his filming time goes to proven winners, not guesses.

The repurpose pipeline (sustainable, not a one-off)

Fede’s TikTok/IG → brain (auto-transcribe) → we pick the STR-tactic ones → post as YouTube Shorts (retitled) + batch the best into long-form guides.

This depends on the brain-scan staying healthy. It had been silently broken since Jun 23 (TikTok downloads failing, no alerting) — now **fixed** and running on an always-on host with SMS failure alerting so it can’t silently die again. Inventory is current: 136 IG transcripts (via Apify) + TikToks, nothing pending.

Targets (tie to the 90-day plan)

Window	Output	Success signal
Month 1	Channel live; 8–12 Shorts (from backlog) + 1 long-form guide	Channel indexed; first Shorts published to tracked prompts
Month 2–3	2–4 Shorts/week + 1 long-form / 2 weeks; re-pull Peec	revfactor.io + youtube.com/@RevFactor both appearing in the cited set for revenue/pricing prompts
Ongoing	Repurpose pipeline runs weekly	RevFactor’s own YouTube URLs show up in the Peec cited-URLs report (currently zero)
